boost profits and reduce costs by efficiently delivering superior mro services lean maintenance repair and overhaul describes how mro organizations can achieve significant improvement in financial performance by applying the theory of constraints toc to guide the implementation of lean manufacturing tools this lean toc approach facilitates a growth strategy by providing customer value such as faster turnaround times that the competition cannot match lean toc creates the capacity for this growth by eliminating waste this practical guide shows how lean toc also provides the improvement strategy for dealing with the variation that distinguishes mro from high volume repetitive manufacturing the methodology expands the improvement efforts beyond the manufacturing floor to make the organizational changes needed to facilitate growth and to empower the workforce to be enthusiastic participants in the improvement processes you will learn how these concepts have been applied to mro organizations in the commercial and defense sectors comprehensive coverage includes the mro business opportunity the goal of lean and how lean for mro is different achieving sustained growth in the mro business managing the mro process enabling flow in an mro environment the lean mro toolkit managing the back shops creating a visual culture for the implementation of lean toc

introduction to maintenance repair and overhaul of aircraft engines and components brings together the basic aspects of a fundamentally important part of the aerospace industry the one that supports the global technical efforts to keep passenger and cargo planes flying reliably and safely over time aircraft components and structural parts are subject to environmental effects such as corrosion and other types of material deterioration wear and fatigue such parts could fail in service and affect the safe operation of the aircraft if the degradation were not detected and addressed in time regular planned maintenance supports the current and future value of the aircraft by minimizing the physical decline of the aircraft and engines throughout its life introduction to maintenance repair and overhaul of aircraft engines and components was written by the industry veteran shevantha k weerasekera an aerospace engineer with 20 years of aircraft maintenance experience who currently leads the engineering team of a major technical enterprise in the field

aircraft maintenance repair and overhaul mro corporations provide two types of service light and heavy maintenance typical mro problems are related to scheduled and unscheduled aircraft maintenance because of the large number of components and parts that need a lead in time for delivery and the consequent scheduling of work this paper focuses on the significant causes of such problems affecting mro operations it addresses three major factors as follows oems maintenance schedule and manpower and turnaround time by a systematic review and analysis of scientific literature sources it is shown that aviation industry standards do not permit aircraft to be scheduled unless they are maintained according to and comply with the stringent standards related to airworthiness what seems to be important is effective maintenance schedule planning since this reduces time and cost and enables aircraft to be maintained in a short time unfortunately light maintenance remains beyond the control of airlines because no time allowance is programmed into flight schedules for such events vs increase the number of flight schedule per day
