the international conference on signals systems and automation icssa 2011 aims to spread awareness in the research and academic community regarding cutting edge technological advancements revolutionizing the world the main emphasis of this conference is on dissemination of information experience and research results on the current topics of interest through in depth discussions and participation of researchers from all over the world the objective is to provide a platform to scientists research scholars and industrialists for interacting and exchanging ideas in a number of research areas this will facilitate

communication among researchers in different fields of electronics and communication engineering the international conference on intelligent system and data processing icisd 2011 is organized to address various issues that will foster the creation of intelligent solutions in the future the primary goal of the conference is to bring together worldwide leading researchers developers practitioners and educators interested in advancing the state of the art in computational intelligence and data processing for exchanging knowledge that encompasses a broad range of disciplines among various distinct communities another goal is to promote scientific information interchange between researchers developers engineers students and practitioners working in india and abroad

Proceedings of the Multi-Conference 2011

2011-06-06

this book is a thoroughly practical way to explore the 8051 and discover c programming through project work through graded projects dogan ibrahim introduces the reader to the fundamentals of microelectronics the 8051 family programming in c and the use of a c compiler the specific device used for examples is the at89c2051 a small economical chip with re writable memory readily available from the major component suppliers a working knowledge of microcontrollers and how to program them is essential for all students of electronics in this rapidly expanding field many students and professionals at all levels need to get up to speed with practical microcontroller applications their rapid fall in price has made microcontrollers the most

exciting and accessible new development in electronics for years rendering them equally popular with engineers electronics hobbyists and teachers looking for a fresh range of projects microcontroller projects in c for the 8051 is an ideal resource for self study as well as providing an interesting enjoyable and easily mastered alternative to more theoretical textbooks practical projects that enable students and practitioners to get up and running straight away with 8051 microcontrollers a hands on introduction to practical c programming a wealth of project ideas for students and enthusiasts

Microcontroller Projects in C for the 8051

2000-06-05

this book presents high quality peer reviewed papers from the international conference on advanced communication and computational technology icacct 2019 held at the national institute of technology kurukshetra india the contents are broadly divided into four parts i advanced computing ii communication and networking iii vlsi and embedded systems and iv optimization techniques the major focus is on emerging computing technologies and their applications in the domain of communication and networking the book will prove useful for engineers and researchers working on physical data link and transport layers of communication protocols also this will be useful for industry professionals interested in manufacturing of communication devices modems routers etc with enhanced computational and data handling capacities

Advances in Communication and Computational Technology

2020-08-13

ecwac2012 is an integrated conference devoted to electronic commerce application and communication in the this proceedings you can find the carefully reviewed scientific outcome of the second international conference on electronic commerce application and communication ecwac 2012 held at march 17 18 2012 in wuhan china bringing together researchers from all around the world in the field

Advances in Electronic Commerce, Web Application and Communication

2012-02-24

unlike traditional embedded systems references this book skips routine things to focus on programming microcontrollers specifically mcs 51 family in c using keil ide the book presents seventeen case studies plus many basic programs organized around on chip resources this learn through doing approach appeals to busy designers mastering basic modules and working hands on with the projects gives readers the basic building blocks for most 8051 programs whether you are a student using mcs 51 microcontrollers for project work or an embedded systems programmer this book will kick start your practical

understanding of the most popular microcontroller bridging the gap between microcontroller hardware experts and c programmers

Exploring C for Microcontrollers

2007-05-31

this book presents high quality research in the field of 3d imaging technology the second edition of international conference on 3d imaging technology 3ddit msp dl continues the good traditions already established by the first 3dit conference ic3dit2019 to provide a wide scientific forum for researchers academia and practitioners to exchange newest ideas and recent achievements in all aspects of image processing and analysis together with their contemporary applications the conference proceedings are published in 2 volumes the main topics of the papers comprise famous trends as 3d image representation 3d image technology 3d images and graphics and computing and 3d information technology in these proceedings special attention is paid at the 3d tensor image representation the 3d content generation technologies big data analysis and also deep learning artificial intelligence the 3d image analysis and video understanding the 3d virtual and augmented reality and many related areas the first volume contains papers in 3d image processing transforms and technologies the second volume is about computing and information technologies computer images and graphics and related applications the two volumes of the book cover a wide area of the aspects of the contemporary multidimensional imaging and the related future trends from

data acquisition to real world applications based on various techniques and theoretical approaches

3D Imaging Technologies—Multidimensional Signal Processing and Deep Learning

2021-08-29

the book presents the select proceedings of the 2nd international conference on sustainable construction technologies and advancements in civil engineering sctace 2021 this book discusses the latest developments and contributions towards sustainable construction technologies and advances in civil engineering various topics covered in this book are construction technologies geotechnical engineering transportation and traffic engineering structural engineering environmental engineering remote sensing and gis geo environmental engineering water resources engineering and earthquake engineering this book will be useful for students researchers and professionals working in the area of civil engineering

Recent Advances in Civil Engineering

Technological Developments in Networking, Education and Automation

2010-06-18

the implementation of radio frequency identification rfid technology in industrial manufacturing and retail supply chain management has seen strong growth in recent years this is partly due to wal marts rfid mandate to its suppliers as more companies along the global supply chain adopt rfid rfid tags embedded can be expected to proliferate in virtually every industrial product ranging from computers to automobiles in the near future large retailers likewal mart and government agencies such as the u s department of defense dod have driven recent developments in rfid technology this in turn has a diffusion effect on hundreds of suppliers and manufacturers as their products are required to be tagged before shipping to these giant customers rfid technology provides a good alternative to automatically reading and writing product information in addition to recording the identity of an object rfid technology also documents its current status recent past and immediate future using modern identification techniques production systems can now produce variants of a product or even different products at a batch size of one a product with an rfid tag can be viewed as an intelligent product several studies in this emerging field indicate the necessity of adopting new manufacturing approaches for making intelligent products digital receipt

contributed papers presented at the conference held at central mechanical engineering research institute durgapur

Green Communications and Networks

2012-01-05

the purpose of this book is to develop capacity building in strategic and non strategic machine tool technology the book contains chapters on how to functionally reverse engineer strategic and non strategic computer numerical control machinery numerous engineering areas such as mechanical engineering electrical engineering control engineering and computer hardware and software engineering are covered the book offers guidelines and covers design for machine tools prototyping augmented reality for machine tools modern communication strategies and enterprises of functional reverse engineering along with case studies features presents capacity building in machine tool development discusses engineering design for machine tools covers prototyping of strategic and non strategic machine tools illustrates augmented reality for machine tools includes internet of things iot for machine tools

IC Master

2000

this book comprises select proceedings of the international conference etaeere 2020 and primarily focuses on renewable

energy resources and smart grid technologies the book provides valuable information on the technology and design of power grid integration on microgrids of green energy sources some of the topics covered include solar pv array hybrid microgrid daylight harvesting green computing photovoltaic applications nanogrid applications ac dc ac converter for wind energy systems solar photovoltaic panels pem fuel cell system and biogas run dual fueled diesel engine the contents of this book will be useful for researchers and practitioners working in the areas of smart grids and renewable energy generation distribution and management

Proceedings of the National Conference on Advanced Manufacturing & Robotics, January 10-11, 2004

2004

this book is a collection of selected papers presented at the first congress on intelligent systems cis 2020 held in new delhi india during september 5 6 2020 it includes novel and innovative work from experts practitioners scientists and decision makers from academia and industry it covers topics such as internet of things information security embedded systems real time systems cloud computing big data analysis quantum computing automation systems bio inspired intelligence cognitive systems cyber physical systems data analytics data web mining data science intelligence for security intelligent decision

making systems intelligent information processing intelligent transportation artificial intelligence for machine vision imaging sensors technology image segmentation convolutional neural network image video classification soft computing for machine vision pattern recognition human computer interaction robotic devices and systems autonomous vehicles intelligent control systems human motor control game playing evolutionary algorithms swarm optimization neural network deep learning supervised learning unsupervised learning fuzzy logic rough sets computational optimization and neuro fuzzy systems

Microcontrollers

2012-11

the proceedings collect selected papers from the 11th international workshop of advanced manufacturing and automation iwama 2021 held in zhengzhou polytechnic china on 11 12 october 2021 topics focusing on novel techniques for manufacturing and automation in industry 4 0 are now vital factors for the maintenance and improvement of the economy of a nation and the quality of life it will help academic researchers and engineering to implement the concept theory and methods in industry 4 0 which has been a hot topic these proceedings will make valuable contributions to academic researchers engineers in the industry for the challenges in the 4th industry revolution and smart factories

Functional Reverse Engineering of Machine Tools

2019-09-23

the book is a collection of high quality peer reviewed research papers presented in international conference on soft computing systems icscs 2015 held at noorul islam centre for higher education chennai india these research papers provide the latest developments in the emerging areas of soft computing in engineering and technology the book is organized in two volumes and discusses a wide variety of industrial engineering and scientific applications of the emerging techniques it presents invited papers from the inventors originators of new applications and advanced technologies

Advances in Smart Grid and Renewable Energy

2021-01-04

this book contains a collection of the papers accepted by the cenet2020 the 10th international conference on computer engineering and networks held on october 16 18 2020 in xi an china the topics focus but are not limited to internet of things and smart systems artificial intelligence and applications communication system detection analysis and application and medical engineering and information systems each part can be used as an excellent reference by industry practitioners

university faculties research fellows and undergraduates as well as graduate students who need to build a knowledge base of the most current advances and state of practice in the topics covered by this conference proceedings this will enable them to produce maintain and manage systems with high levels of trustworthiness and complexity

Congress on Intelligent Systems

2021-05-27

these proceedings of the 2012 international conference on electrical insulating materials and electrical engineering eimee 2012 are grouped into eight chapters materials science and engineering mechanical engineering and applied mechanics electrical machinery and engineering data image and signal processing control theory and control engineering communication and networks information engineering and technology other related topics

Advanced Manufacturing and Automation XI

2022-03-07

wireless communication has emerged as an independent discipline in the past decades everything from cellular voice

telephony to wireless data transmission using wireless sensor networks has profoundly impacted the safety production and productivity of industries and our lifestyle as well after a decade of exponential growth the wireless industry is one of the largest industries in the world therefore it would be an injustice if the wireless communication is not explored for mining industry underground mines which are characterized by their tough working conditions and hazardous environments require fool proof mine wide communication systems for smooth functioning of mine workings and ensuring better safety proper and re able communication systems not only save the machine breakdown time but also help in immediate passing of messages from the vicinity of underground working area to the surface for day to day normal mining operations as well as for speedy rescue operations in case of disaster therefore a reliable and effective communication system is an essential requisite for safe working and maintaining requisite production and productivity of underground mines most of the existing systems generally available in underground mines are based on line wired communication principle hence these are unable to withstand in the disaster conditions and difficult to deploy in inaccessible places therefore wireless communication is an indispensable reliable and convenient system and essential in case of day to day normal duty or disaster situations

csise2011 is an integrated conference concentrating its focus upon computer science intelligent system and environment in the proceeding you can learn much more knowledge about computer science intelligent system and environment of researchers all around the world the international conference will provide a forum for engineers scientist teachers and all researchers to discuss their latest research achievements and their future research plan the main role of the proceeding is to be used as an exchange pillar for researchers who are working in the mentioned field in order to meet high standard of springer s advances in intelligent and soft computing the organization committee has made their efforts to do the following things firstly poor quality paper has been refused after reviewing course by anonymous referee experts secondly periodically review meetings have been held around the reviewers about five times for exchanging reviewing suggestions finally the conference organization had several preliminary sessions before the conference through efforts of different people and departments the conference will be successful and fruitful we hope that you can get much more knowledges from our csise2011 and we also hope that you can give us good suggestions to improve our work in the future

Medicine Manufacturing Industry Automation Using Microcontroller

2013

doctoral thesis dissertation from the year 2014 in the subject medicine biomedical engineering grade a course phd language english abstract the main purpose of the present work is to design and implement a prototype ecg system with wireless links for continuous monitoring of the subject for cardiac related problems the ecg signal acquired from subject is filtered digitized and compressed for wireless communication the proposed system can be extended upon interfacing with other devices for continuous monitoring of other vital parameters of the patient in automation of the ecg signal analysis the workload of the medical professionals can be reduced the automated system provides an alert when critical changes are detected by the system concisely stated ecg of the patient is continuously monitored and deviations from normalcy are detected in real time the changes in the ecg could be due to heart attack fibrillation or arrhythmias in case of emergency data is transmitted to a medical practitioner who in turn can provide necessary directions to take care of the situation in this manner as the problems can be detected as and when they occur the remedial actions are initiated before the problems become serious the complete ecg diagnostic system includes a low power instrumentation amplifier filters adc microcontroller and zigbee modules matlab labview are used for signal analysis and classification these environments are capable of not only collecting recording transmitting and displaying ecg data on a real time basis but also for analyzing the acquired ecg data in order to detect the

cardiac abnormalities the mit bih database signals were used for validation and evaluation of classification algorithms in order to reduce the memory requirements for storing the acquired ecg signals ecg data was compressed discrete cosine transform dct technique was applied for ecg data compression here dct showed good performance with a compression ratio cr of 82 90 43 and percent root mean difference prd of 7 9 0 93 linear vector quantization method lvq is used for identifying the abnormalities associated with the ecg signal after training the lvq process with a reasonable number of samples the algorithm is used for classifying ecg signals the techniques used in the present work for ecg signal compression and classification gave better results compared to those found in the literature
