this book tells one of the greatest stories in the history of school mathematics two of the names in the title samuel pepys and isaac newton need no introduction and this book draws attention to their special contributions to the history of school mathematics according to ellerton and clements during the last quarter of the seventeenth century pepys and newton were key players in defining what school mathematics beyond arithmetic and elementary geometry might look like the scene at which most of the action occurred was christ s hospital which was a school ostensibly for the poor in central london the royal mathematical school rms was established at christ s hospital in 1673 it was the less well known james hodgson a fine mathematician and rms master between 1709 and 1755 who demonstrated that topics such as logarithms plane and spherical trigonometry and the application of these to navigation might systematically and successfully be taught to 12 to 16 year old school children from a wider history of school education perspective this book tells how the world s first secondary school mathematics program was created and how slowly but surely what was being achieved at rms began to influence school mathematics in other parts of great britain europe and america the book has been written from the perspective of the history of school mathematics ellerton and clements s analyses of pertinent literature and of archival data and their interpretations of those analyses have led them to conclude that rms was the first major school in the world to teach mathematics beyond arithmetic on a systematic basis to students aged between 12 and 16 throughout the book ellerton and clements examine issues through the lens of a lag time theoretical perspective from a historiographical perspective this book emphasizes how the history of rms can be portrayed in very different ways depending on the vantage point from which the history is written the authors write from the vantage point of international developments in school mathematics education and therefore their history of rms differs from all other histories of rms most of which were written from the perspective of the history of christ s hospital

from needle sprouting cactus skin to a middle aged body that begins to turn into a university manchester author james hodgson s first pamphlet offers four short stories about mutation and evolution that take being itself to be a supple and slippery thing these stories engage with metamorphosis both as a metaphysical consequence of being but also as a literary act of defiance and self determination queer men of different stripes undergo transformations in their search for wholeness and meaning with results that are surreal visceral and political sexiness is monstrous and monstrosity is sexy here for queer desire is also at the heart of each of these stories and is often the catalyst for change james hodgson is a bold new voice and a worthy winner of the inaugural superbia chapbook competition in these stories he bristles contorts and swerves proving that his is a voice to listen out for in future
