the master ship builders of seventeenth century venice formed part of what was arguably the greatest manufacturing complex in early modern europe as many as three thousand masters apprentices and laborers regularly worked in the city s enormous shipyards this is the social history of the men and women who helped maintain not only the city s dominion over the sea but also its stability and peace drawing on a variety of documents that include nearly a thousand petitions from the shipbuilders to the venetian governments as well as on parish records inventories and wills robert c davis offers a vivid and compelling account of these early modern workers he explores their mentality and describes their private and public worlds which in some ways he argues prefigured the factories and company towns of a later era he uncovers the far reaching social and cultural role played by women in this industrial community he shows how the venetian government formed its shipbuilders into a militia to maintain public order and he describes the often colorful ways in which venetians dealt with the tensions that role provoked including officially sanctioned community fistfights on the city s bridges the recent decision by the italian government to return the venetian arsenal to civilian control has sparked renewed interest in the subject among historians shipbuilders of the venetian arsenal offers new evidence on the ways in which large state run manufacturing operations furthered the industrialization process as well as on the extent of workers influence on the social dynamics of the early modern european city

this new handbook on radar signal analysis adopts a deliberate and systematic approach it uses a clear and consistent level of delivery while maintaining strong and easy to follow mathematical details the emphasis of this book is on radar signal types and their relevant signal processing and not on radar systems hardware or components this handbook serves as a valuable reference to a wide range of audience more specifically college level students practicing radar engineers as well as casual readers of the subject are the intended target audience of the first few chapters of this book as the book chapters progress these grow in complexity and specificity accordingly later chapters are intended for practicing engineers graduate college students and advanced readers finally the last few chapters contain several special topics on radar systems that are both educational and scientifically entertaining to all readers the presentation of topics in this handbook takes the reader on a scientific journey whose major landmarks comprise the different radar subsystems and components in this context the chapters follow the radar signal along this journey from its birth to the end of its life along the way the different relevant radar subsystems are analyzed and discussed in great detail the chapter contributors of this new handbook comprise experienced academia members and practicing radar engineers their combined years of academic and real world experiences are in excess of 175 together they bring a unique easy to follow mix of mathematical and practical presentations of the topics discussed in this book see the chapter contributors section to learn more about these individuals
