*The New Technology of Crime, Law and Social Control* 2007-01-01 america is a nation founded on justice and the rule of law but our laws are too complex and legal advice too expensive for poor and even middle class americans to get help and vindicate their rights criminal defendants facing jail time may receive an appointed lawyer who is juggling hundreds of cases and immediately urges them to plead guilty civil litigants are even worse off usually they get no help at all navigating the maze of technical procedures and rules the same is true of those seeking legal advice like planning a will or negotiating an employment contract rebooting justice presents a novel response to longstanding problems the answer is to use technology and procedural innovation to simplify and change the process itself in the civil and criminal courts where ordinary americans appear the most we should streamline complex procedures and assume that parties will not have a lawyer rather than the other way around we need a cheaper simpler faster justice system to control costs we cannot untie the gordian knot by adding more strands of rope we need to cut it to simplify it

*Technology in Criminal Justice* 1995 security and risk technologies in criminal justice takes students through the evolution of risk technology devices processes and prevention this seminal text unpacks technology s influence on our understanding of governance and social order in areas of criminal justice policing and security with a foreword by leading criminologist kevin haggerty the collection consists of three sections that explore the impact of big data traditional risk practices and the increased reliance on technology in criminal justice eight chapters offer diverse examples that are linked by themes of preventative justice calculability of risk the theatre and reality of technology and the costs of justice with both national and international appeal this vital resource is ideal for undergraduate and graduate students in criminology police studies or sociology

**The Routledge Handbook of Technology, Crime and Justice** 2017-02-24 part ii engineering decisions in the 21st century engineers work in an increasingly complex entanglement of ideas people cultures technology systems and environments today decisions made by engineers often have serious implications for not only their clients but for society as a whole and the natural world such decisions may potentially influence cultures ways of living as well as alter ecosystems which are in delicate balance in order to make appropriate decisions and to co create ideas and innovations within and among the complex networks of communities which currently exist and are shaped by our decisions we need to regain our place as professionals to realise the significance of our work and to take responsibility in a much deeper sense engineers must develop the ability to respond to emerging needs of all people across all cultures to do this requires insights and knowledge which are at present largely within the domain of the social and political sciences but which need to be shared with our students in ways which are meaningful and relevant to engineering this book attempts to do just that in part 1 baillie introduces ideas associated with the ways in which engineers relate to the communities in which they work drawing on scholarship from science and technology studies globalisation and development studies as well as work in science communication and dialogue this introductory text sets the scene for an engineering community which engages with the public in part 2 catalano frames the thinking processes necessary to create ethical and just decisions in engineering to understand the implications of our current decision making processes and think about ways in which we might adapt these to become more socially just in the future in part 3 baillie and catalano have provided case studies of everyday issues such as water garbage and alarm clocks to help us consider how we might see through the lenses of our new knowledge from parts 1 and 2 and apply this to our everyday existence as engineers

*Rebooting Justice* 2017 the realities of the high tech global economy for women and families in the united states the idea that technology will pave the road to prosperity has been promoted through both boom and bust today we are told that universal broadband access high tech jobs and cutting edge science will pull us out of our current economic downturn and move us toward social and economic equality in digital dead end virginia eubanks argues that to believe this is to engage in a kind of magical thinking a technological utopia will come about simply because we want it to this vision of the miraculous power of high tech development is driven by flawed assumptions about race class and gender the realities of the information age are more complicated particularly for poor and working class women and families for them information technology can be both a tool of liberation and a means of oppression but despite the inequities of the high tech global economy optimism and innovation flourished when eubanks worked with a community of resourceful women living at her local ywca eubanks describes a new approach to creating a broadly inclusive and empowering technology for people popular technology which entails shifting the focus from teaching technical skill to nurturing critical technological citizenship building resources for learning and fostering social movement important notice the digital edition of this book is missing some of the images found in the physical edition
