attribute grammars have shown themselves to be a useful formalism for specifying the syntax and the static semantics of programming languages they are also useful for implementing syntax directed editors compilers translator writing systems and compiler generators and any application that has a strong syntactic base however no textbooks are available that cover the entire field to redress this imbalance an international summer school on attribute grammars applications and systems was held in prague czechoslovakia in june 1991 the course aimed at teaching the state of the art in attribute grammars and their relation to other language specification methods this volume presents the proceedings of the school the papers are well suited for self study and a selection of them can be used for introductory courses in attribute grammars

Exercises and Solutions in Statistical Theory

2013-06-24

exercises and solutions in statistical theory helps students and scientists obtain an in depth understanding of statistical theory by working on and reviewing solutions to interesting and challenging exercises of practical importance unlike similar books this text incorporates many exercises that apply to real world settings and provides much more thorough solutions the exercises and selected detailed solutions cover from basic probability theory through to the theory of statistical inference many of the exercises deal with important real life scenarios in areas such as medicine epidemiology actuarial science social science engineering physics chemistry biology environmental health and sports several exercises illustrate the utility of study design strategies sampling from finite populations maximum likelihood asymptotic theory latent class analysis conditional inference regression analysis generalized linear models bayesian analysis and other statistical topics the book also contains references to published books and articles that offer more information about the statistical concepts designed as a supplement for advanced undergraduate and graduate courses this text is a valuable source of classroom examples homework problems and examination questions it is also useful for scientists interested in enhancing or refreshing their theoretical statistical skills the book improves readers comprehension of the principles of statistical theory and helps them see how the principles can be used in practice by mastering the theoretical statistical strategies necessary to solve the exercises readers will be prepared to successfully study even higher level statistical theory

Emerging Solutions for Future Manufacturing Systems

2006-01-04

industries and particularly the manufacturing sector have been facing difficult challenges in a context of socio economic turbulence characterized by complexity as well as the speed of change in causal interconnections in the socio economic environment in order to respond to these challenges companies are forced to seek new technological and organizational solutions in this context two main characteristics emerge as key properties of a modern automation system agility and distribution agility because systems need not only to be flexible in order to adjust to a number of a priori defined scenarios but rather must cope with unpredictability distribution in the sense that automation and business processes are becoming distributed and supported by collaborative networks emerging solutions for future manufacturing systems includes the papers selected for the basys 04 conference which was held in vienna austria in september 2004 and sponsored by the international federation for information processing ifip

Cumulated Index Medicus

1985

this book evaluates the potential of the combined use of district heating networks and cogeneration in the european union eu it also proposes measures to remove barriers hindering their widespread implementation formulates policies for their implementation and evaluates their economic energy and environmental consequences the book presents a preliminary assessment of the likely cost and the impact of widespread adoption of district heating networks and cogeneration carried out in three cities that represent the variety of climatic conditions in the eu based on this assessment it is estimated that by undertaking the maximum economically feasible implementation across the eu fuel savings of 95m year would be achieved representing energy savings of 6 400 petajoules pj which is around 15 of the total final energy consumption in the eu in 2013 46 214 5 pj using simple and quick calculations and not specific software the method used allows the evaluation of the potential benefits of retrofitting existing power plants into cogeneration plants and connecting them to nearby heating networks in light of increasing energy costs and environmental concerns the book is of interest to heating engineers city
