first high caliber research conference in the world to be completely conducted online in real time via the internet cisse received 255 research paper submissions and the final program included 140 accepted papers from more than 45 countries the whole concept and format of cisse 2005 was very exciting and ground breaking the powerpoint presentations final paper manuscripts and time schedule for live presentations over the web had been available for 3 weeks prior to the start of the conference for all registrants so they could pick and choose the presentations they want to attend and think about questions that they might want to ask the live audio presentations were also recorded and are part of the permanent cisse archive which includes all power point presentations papers and recorded presentations all aspects of the conference were managed on line not only the reviewing submissions and registration processes but also the actual conference conference participants authors presenters and attendees only needed an internet connection and sound available on their computers in order to be able to contribute and participate in this international ground breaking conference the on line structure of this high quality event allowed academic professionals and industry participants to contribute work and attend world class technical presentations based on rigorously refereed submissions live without the need for investing significant travel funds or time out of the office suffice to say that cisse received submissions from more than 50 countries for whose researchers this opportunity presented a much more affordable dynamic and well planned event to attend and submit their work to versus a classic on the ground conference the cisse conference audio room provided superb audio even over low speed internet connections the ability to display powerpoint presentations and cross platform compatibility the conferencing software runs on windows mac and any other operating system that supports java in addition the conferencing system allowed for an unlimited number of participants which in turn granted cisse the opportunity to allow all participants to attend all presentations as opposed to limiting the number of available seats for each session the implemented conferencing technology starting with the submission review system and ending with the online conferencing capability allowed cisse to conduct a very high quality fulfilling event for all participants see cissee2005 org sections ieta tene eiae

this best selling title considered for over a decade to be essential reading for every serious student and practitioner of computer design has been updated throughout to address the most important trends facing computer designers today in this edition the authors bring their trademark method of quantitative analysis not only to high performance desktop machine design but also to the design of embedded and server systems they have illustrated their principles with designs from all three of these domains including examples from consumer electronics multimedia and web technologies and high performance computing the book retains its highly rated features fallacies and pitfalls which share the hard won lessons of real designers historical perspectives which provide a deeper look at computer design history putting it all together which present a design example that illustrates the principles of the chapter worked examples which challenge the reader to apply the concepts theories and methods in smaller scale problems and cross cutting issues which show how the ideas covered in one chapter interact with those presented in others in addition a new feature another view presents brief design examples in one of the three domains other than the one chosen for putting it all together the authors present a new organization of the material as well reducing the overlap with their other text computer organization and design a hardware software approach 2 e and offering more in depth treatment of advanced topics in multithreading instruction level parallelism vliw architectures memory hierarchies storage devices and network technologies also new to this edition is the adoption of the mips 64 as the instruction set architecture in addition to several online appendixes two new appendixes will be printed in the book one contains a complete review of the basic concepts of pipelining the other provides solutions a selection of the exercises both will be invaluable to the student or professional learning on her own or in the classroom hennessy and patterson continue to focus on fundamental techniques for designing real machines and for maximizing

their cost performance presents state of the art design examples including ia 64 architecture and its first implementation the itanium pipeline designs for pentium iii and pentium iv the cluster that runs the google search engine emc storage systems and their performance sony playstation 2 infiniband a new storage area and system area network sunfire 6800 multiprocessor server and its processor the ultrasparc iii trimedia tm32 media processor and the transmeta crusoe processor examines quantitative performance analysis in the commercial server market and the embedded market as well as the traditional desktop market updates all the examples and figures with the most recent benchmarks such as spec 2000 expands coverage of instruction sets to include descriptions of digital signal processors media processors and multimedia extensions to desktop processors analyzes capacity cost and performance of disks over two decades surveys the role of clusters in scientific computing and commercial computing presents a survey taxonomy and the benchmarks of errors and failures in computer systems presents detailed descriptions of the design of storage systems and of clusters surveys memory hierarchies in modern microprocessors and the key parameters of modern disks presents a glossary of networking terms

the performance of software components depends on several factors including the execution platform on which the software components run to simplify cross platform performance prediction in relocation and sizing scenarios a novel approach is introduced in this thesis which separates the application performance profile from the platform performance profile the approach is evaluated using transparent instrumentation of java applications and with automated benchmarks for java virtual machines
