petroleum and natural gas still remain the single biggest resource for energy on earth even as alternative and renewable sources are developed petroleum and natural gas continue to be by far the most used and if engineered properly the most cost effective and efficient source of energy on the planet drilling engineering is one of the most important links in the energy chain being after all the science of getting the resources out of the ground for processing without drilling engineering there would be no gasoline jet fuel and the myriad of other have to have products that people use all over the world every day following up on their previous books also available from wiley scrivener the authors two of the most well respected prolific and progressive drilling engineers in the industry offer this groundbreaking volume they

cover the basics tenets of drilling engineering the most common problems that the drilling engineer faces day to day and cutting edge new technology and processes through their unique lens written to reflect the new changing world that we live in this fascinating new volume offers a treasure of knowledge for the veteran engineer new hire or student this book is an excellent resource for petroleum engineering students reservoir engineers supervisors managers researchers and environmental engineers for planning every aspect of rig operations in the most sustainable environmentally responsible manner using the most up to date technological advancements in equipment and processes

the existence and qualitative properties of nontrivial solutions for some important nonlinear schrödinger systems have been studied in this thesis for a well known system arising from nonlinear optics and bose einstein condensates bec in the subcritical case qualitative properties of ground state solutions including an optimal parameter range for the existence the uniqueness and asymptotic behaviors have been investigated and the results could firstly partially answer open questions raised by ambrosetti colorado and sirakov in the critical case a systematical research on ground state solutions including the existence the nonexistence the uniqueness and the phase separation phenomena of the limit profile has been presented which seems to be the first contribution for bec in the critical case furthermore some quite different phenomena were also studied in a more general critical system for the classical brezis nirenberg critical exponent problem the sharp energy estimate of least energy solutions in a ball has been investigated in this study finally for ambrosetti type linearly coupled schrödinger equations with critical exponent an optimal result on the existence and nonexistence of ground state solutions for different coupling constants was also obtained in this thesis these results have many applications in physics and pdes
