vector borne diseases are major causes of sickness disability and death worldwide these diseases are caused by parasites bacteria or viruses transmitted by various vectors including mosquitoes sandflies fleas ticks lice and others insecticides form an essential part of vector control the most widely used and effective strategy to reduce the burden of these diseases knowledge of vector resistance to insecticides is therefore crucial for the selection of effective vector control interventions this document provides guidance on how to assess insecticide resistance in mosquito vectors and is aimed at field entomologists and biologists within ministries of health or partner institutions it is also directed at programme managers and others in charge of designing and implementing vector control strategies who need to draw on resistance data to inform their decisions lastly it can help researchers and the pesticide industry to assess in a standardized way vector resistance to compounds used in

existing and new vector control products it supersedes the test procedures for insecticide resistance monitoring in malaria vector mosquitoes 2nd ed published in 2016

the clean development mechanism cdm a market mechanism under the kyoto protocol has been successful in supporting mitigation actions through carbon finance with nearly 7 700 projects and 290 program of activities registered by the cdm executive board the cdm allows ghg emission reduction projects in developing countries to generate certified emission reductions which can be used to offset mandatory or voluntary emission reduction targets it however requires a robust monitoring reporting and verification mrv to ensure social and environmental integrity of such projects and the emissions reductions thereof this mrv manual is intended to assist cdm project developers in understanding and managing the mrv requirements and process of their cdm projects in a simple step by step manner with the help of real examples and practical tips while this mrv manual has been developed primarily to assist cdm project developers it also aspires to be of help for projects participating in other existing and emerging market mechanisms these may include bilateral mechanisms voluntary carbon markets regional national and subnational carbon markets and any of the cooperative approaches and new market mechanism for the post 2020 carbon markets consequent to the paris agreement adopted at

cop21 in december 2015 as carbon markets in the region evolve beyond cdm there is a strong need to maintain and further build institutional capacities to ensure growth and enhanced efectivity of carbon markets and this mrv manual is an efort in that direction

this book is the first comprehensive overview of the emerging field of cuffless blood pressure monitoring increasing clinical evidence proves that longitudinal measurements of blood pressure allow for earlier detection and better management of multiple medical conditions and for superior prediction of cardiovascular events unfortunately today s clinical and industry standards for blood pressure monitoring still require the inflation of a pneumatic cuff around a limb each time a measurement is taken over the last decades clinicians scientists and device manufacturers have explored the feasibility of technologies that reduce or even completely eliminate the need of cuffs initiating the era of cuffless blood pressure monitoring among the existing literature this book is intended to be a practical guide to navigate across this emerging field the chapters of the handbook have been elaborated by experts and key opinion leaders in the domain and will guide the reader along the clinical scientific technical and regulatory aspects of cuffless blood pressure monitoring

it is well known that cardiovascular events occur more frequently in the morning as blood pressure bp levels have been shown to increase during the period from night to early morning in recent years clinical research using ambulatory blood pressure monitoring abpm or home bp monitoring has clarified that morning bp and bp surge are more closely related to the cardiovascular risk than clinical bp this practical manual from field leading expert dr kazuomi kario reviews recent evidence on morning and nocturnal hypertension and the it technologies physicians can use to support patients in home monitoring bp guidance on management via antihypertensive drugs is also discussed and with the aim of promoting perfect 24 hour bp control
