specialist periodical reports provide systematic and detailed review coverage of progress in the major areas of chemical research written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry for over 80 years the royal society of chemistry and its predecessor the chemical society have been publishing reports charting developments in chemistry which originally took the form of annual reports however by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series specialist periodical reports was born the annual reports themselves still existed but were divided into two and subsequently three volumes covering inorganic organic and physical chemistry for more general coverage of the highlights in chemistry they remain a must since that time the spr series has altered according to the fluctuating degree of activity in various fields of chemistry some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued

The Science of Thought;

2015-09-28

fragments of science volume 2 by john tyndall here we have atoms between which a strong attraction is exercised and also atoms between which a weak attraction is exercised one atom can jostle another out of its place in virtue of a superior force of attraction but though the amount of force exerted varies thus from atom to atom it is still an attraction of the same mechanical quality if i may use the term as that of gravity itself its intensity might be measured in the same way namely by the amount of motion which it can generate in a certain time
