between 1917 and 1920 from the bolshevik revolution to the definitive statement of american opposition to bolshevik russia soviets and americans searched for ways to effect meaningful interactions between their two nations in the absence of formal diplomatic relations during these years wide ranging discussions occurred on a variety of serious issues from military collaboration and economic relations to the comprehensive settlement of political and military disputes at the same time extensive debates took place in both countries about the nature of the relations between them as mcfadden shows in this pathbreaking book based on research in soviet archives as well as previously unused private collections and government archives in the united states and great britain a surprising number of concrete agreements were reached between the two countries these included continued operation of the american red cross in russia the transfer of war materials from the russian army to the americans the sale of strategic supplies of platinum from the bolsheviks to the united states and the exemption of a number of american corporations from soviet government nationalization decrees numerous important diplomats and politicians were involved in these negotiations mcfadden offers a timely reevaluation in a post cold war era

this book offers new and cutting edge analyses of under explored subjects and issues in the realm of soft power it attempts to fill significant scholarly gaps in understanding the process by which soft power is created as well as gaps in demonstrating its impact soft power is one of the most influential ideas in the study of international politics over the past thirty years can nations attain their most vital foreign policy objectives in agreeable ways advocates of the concept of soft power have vociferously answered in the affirmative after many years of thinking in the field of international affairs that the only effective path to influence in international politics was military and economic power the idea of soft power offers new and exciting possibilities of gaining such influence through a more benign path one that elevates cooperation and esteem as preferred alternatives to violence threat and military capacity this book posits that the realization of the full potential of soft power as a foundation for international relations is a crucial goal for our present world one beset by war and planetary crises the book will be of special interest to researchers across political science international relations cultural studies and foreign policy

it was originally published as a special issue of the journal of political power

urban transportation problems abound across america including jammed highways during rush hours deteriorating bus service and strong pressures to build new rail systems most solutions attempt either to increase transportation capacity by building more roads and expanding mass transit or to manage existing capacity through hov restrictions exclusive bus lanes and employer based policies such as flexible work hours this book develops an alternative solution to urban transportation problems based on economic analysis but well aware of the political constraints on policymakers the authors estimate that efficient pricing and service policies could save more than 10 billion in annual net benefits over current practices but argue that powerful entrenched political and institutional forces will continue to thwart efficient economic solutions to improve urban transportation they believe however that some form of privatization would likely improve social welfare more than an efficient public sector system facing fewer operating restrictions greater economic incentives and stronger competitive pressures private suppliers could substantially improve the efficiency of urban operations and offer services that are more responsive to the needs of all types of travelers the authors conclude that policymakers have bestowed huge benefits on the public by allowing the private sector to play a leading and unencumbered role in the provision of intercity transportation public officials should take the next step and allow the private sector to play a leading role in the provision of urban transportation

ad hoc wireless networks present a unique design problem for routing wireless networks suffer from low bandwidth due to high rates of interference and inherent limitations of the medium mobility also increases the bandwidth used for control packets to conserve on precious bandwidth routing protocols should generate as few updates as possible in this dissertation we propose distance vector solutions to ad hoc routing because unlike existing routing solutions our solutions do not use sequence numbers and thus are not prone to inefficient or wrong behavior in the presence of node failures first we introduce roam the first protocol to correctly tackle the searching to infinity problem found in on demand routing protocols roam can be used in networks with low rates of topology changes because it required reliable updates next we describe two protocols dst on demand and best table driven for networks with high rates of topology change simulation experiments carried out in two different simulation packages show that these protocols perform an order of magnitude better than representative on demand and table driven routing solutions for ad hoc networks finally we introduce mdst an on demand protocol that extends the source tracing algorithm used in dst to create and maintain multiple paths in an ad hoc wireless network multipath routing can be used in ad hoc networks to achieve greater resilience to route failures and better end to end delays multipath routing is also essential when using qos metrics like delay in order to avoid route oscillation we show that multiple paths that are node disjoint and loop free can be maintained with less overhead than dst further these multiple paths decrease the delay of packet delivery and increase the throughput of the network

while socioeconomic status does affect students success both in academics and in future status in adult life it does not have to be the only deciding factor in his study alternate route to school effectiveness and student achievement dr patrick chudi okafor discusses the need to enhance school climate as an alternate to socioeconomic status in promoting students success he also investigates the climate in new york city public schools as the means of schools survival development and growth as it affects both school effectiveness and student academic achievement he further considers schools teachers parents communities and governments with respect to their roles in students academic development and growth these considerations among others led dr okafor to offer solutions to the issue of failure associated with low socioeconomic status at a time when more children are falling within this bracket and the gap between the rich and the poor continues to widen a quality learning environment presents a strong stimulus for societal change development and growth by basing the overarching framework of his study on openness of the school and family systems dr okafor builds on the idea behind the saying it takes a village to raise a child the academic relationship between the home and the school must be improved to guarantee sustainable student academic performance and the home climate is a major contributor to what children bring to school just as the school climate is a major determinant to how it is transformed

reforming public sector organizations their structures policies processes and practices is notoriously difficult in rich and poor countries alike even in the most favorable of circumstances the scale and complexity of the tasks to be undertaken are enormous requiring levels of coordination and collaboration that may be without precedent for those involved entirely new skills may need to be acquired by tens of thousands of people compounding these logistical challenges is the pervasive reality that circumstances often are not favorable to large scale reform whether a country is rich or poor the choice is not whether but how to reform the public sector how optimal design characteristics robust political support and enhanced organizational capability to implement and adapt will be forged over time this edited volume helps address the how question it brings together reform experiences in public financial management and the public sector more broadly from eight country cases in east asia cambodia indonesia lao people s democratic republic malaysia myanmar papua new guinea thailand and vietnam these countries are at different stages of reform most of the reform efforts would qualify as successes while some had mixed outcomes and others could be considered failures the focus of each chapter is less on formally demonstrating success or not of specific reform but on documenting how reformers maneuvered within different country contexts to achieve specific outcomes despite the great difficulty in reforming the public sector decision makers can draw renewed energy and inspiration learning from those countries sectors and subnational spaces where substantive not merely cosmetic change has been achieved and they can identify what pitfalls to avoid
