the three volume handbook showcases the state of the art in the use of concentrated sunlight to produce electricity industrial process heat renewable fuels including hydrogen and low carbon synthesis gas and valuable chemical commodities the handbook illustrates the value and diversity of applications for concentrating solar power to contribute to the expanding decarbonization of multiple cross cutting energy sectors volume 1 concentrating solar thermal power provides an overview of key technologies principles and challenges of concentrating solar power csp as well as the use of concentrating solar thermal for process heating and district markets the ten chapters of this volume provide the reader with the technical background on the solar resource for concentrating solar thermal the principles and design of concentrating optics and descriptions of state of the art and emerging solar collector and receiver technologies thermal storage and thermal to electric conversion and power cycles for csp it also contains a comprehensive summary of operations and maintenance requirements for csp plants and commercial csp plants and markets around the world volume 2 solar thermochemical processes and products covers the use of concentrated solar radiation as the heat source to drive endothermic chemical reactions to produce renewable fuels and valuable chemical commodities equivalently storing solar energy in chemical bonds the thermodynamic underpinnings of a number of approaches to produce fuel and results of demonstrations of solar thermochemical reactors for these processes at prototype scale are presented processes presented include thermochemical metal oxide reduction oxidation cycles to split water and carbon dioxide solar chemical looping reformation of methane to produce synthesis gas high temperature electrochemistry and gasification of biomass research on the thermochemical storage for csp and high temperature production of cement and ammonia to illustrate the use concentrated solar energy to produce valuable chemical products are also included volume 3 contains reprinted archival papers to support and supplement the material in volumes 1 and 2 these papers provide background information on the economics and alternative use cases of csp not covered in volume 1 and expand on the material related to the chapter topics presented in volume 2 potential commercialization such as prototype and demonstration projects are highlighted the papers are intended as a starting point for a more in depth study of the topics

medical device regulation in asia has gained more importance than ever governments and regulatory bodies across the region have put in place new regulatory systems or refined the existing ones a registered product requires a lot of technical documentation to prove its efficacy safety and quality a smooth and successful registration process demands soft skills for dealing with various key stakeholders in the government testing centers and hospitals and among doctors this handbook covers medical device regulatory

systems in different countries iso standards for medical devices clinical trial and regulatory requirements and documentation for application it is the first to cover the medical device regulatory affairs in asia each chapter provides substantial background materials relevant to the particular area to have a better understanding of regulatory affairs

every year there are 8 8 million new active cases and nearly two million deaths worldwide from tuberculosis about 5 000 every day mostly in the poorest communities of the developing world one third of the world s population has latent tb which may later develop into an active form of the disease and it has also become the leading cause of death among people with hiv multidrug resistance is also a growing problem a key challenge for the public health community is to be able to effectively diagnose patients so that valuable resources and medicines are not wasted on misdiagnosis and repeat treatments this report written by an international network of researchers and policy experts examines the global market for tb diagnostics available for active disease latent infection drug resistance and treatment response it provides a sound basis for diagnostics development suitable for various levels of health systems in industrialised and developing countries

discussing the future of energy production and management in a changing world this book presents the proceedings of the 2nd international conference on energy production and management in the 21st century the quest for sustainable energy the intention of the book is to examine the future of energy production and management in a changing world and follows on from the first and very successful meeting held in ekaterinburg russia in 2014 developed societies require an ever increasing amount of energy resources which creates complex technological challenges the challenge in many cases is the conversion of new sources of energy into useful forms such as electricity heat and fuel while finding efficient ways of storing and distributing energy equal challenges lie with the production of such renewable energy at an acceptable cost including damage to the environment as well as with integration of those resources into the existing infrastructure the book deliberates the energy use of industrial processes including the imbedded energy contents of materials such as those in the built environment energy production distribution and usage result in environmental risks which need to be better understood they are part of the energy economics and relate to human environmental health as well as ecosystems behaviour a number of topics are covered including energy and the city energy security energy distribution energy networks processing of oil and gas emissions pipelines renewable energies energy use in building industry and transport safety management tight energy fields energy and climate change and biomass and biofuels
