this collection of essays explains and encourages new reflection on paul rabinow s pioneering project to anthropologize the west his goal is to exoticize the western constitution of reality emphasize those domains most taken for granted as universal and show how their claims to truth are linked to particular social practices hence becoming effective social forces he has recently begun to focus on the core of western rationality in particular the practices of molecular biology as they apply to our understanding of human nature this book moves in new directions by posing questions about how scientific practice can be understood in terms of ethics as well as in terms of power the topics include how french socialist urban planning in the 1930s engineered the transition from city planning to life planning how the discursive and nondiscursive practices of the human genome project and biotechnology have refigured life labor and language and how a debate over patenting cell lines and over the dignity of life required secular courts to invoke medieval notions of the sacred building on an ethnographic study of the invention of the polymerase chain reaction which enables the rapid production of specific sequences of dna in millions of copies rabinow in the final essay reflects in dialogue with biochemist tom white on the place of science in modernity on science as a vocation and on the differences between the human and natural sciences

this work is a powerful demonstration of how historical analysis can be brought to bear on the study of strategic issues and conversely how strategic thinking can help drive historical research based largely on newly released american archives history and strategy focuses on the

twenty years following world war ii by bridging the sizable gap between the intellectual world of historians and that of strategists and political scientists the essays here present a fresh and unified view of how to explore international politics in the nuclear era the book begins with an overview of strategic thought in america from 1952 through 1966 and ends with a discussion of making sense of the nuclear age trachtenberg reevaluates the immediate causes of world war i studies the impact of the shifting nuclear balance on american strategy in the early 1950s examines the relationship between the nuclearization of nato and u s west european relations and looks at the berlin and the cuban crises he shows throughout that there are startling discoveries to be made about events that seem to have been thoroughly investigated

states are more likely to engage in risky and destabilizing actions such as military buildups and preemptive strikes if they believe their adversaries pose a tangible threat yet despite the crucial importance of this issue we don t know enough about how states and their leaders draw inferences about their adversaries long term intentions knowing the adversary draws on a wealth of historical archival evidence to shed new light on how world leaders and intelligence organizations actually make these assessments keren yarhi milo examines three cases britain s assessments of nazi germany s intentions in the 1930s america s assessments of the soviet union s intentions during the carter administration and the reagan administration s assessments of soviet intentions near the end of the cold war she advances a new theoretical framework called selective attention that emphasizes organizational dynamics personal diplomatic interactions and cognitive and affective factors yarhi milo finds that decision makers don t pay as much attention to those aspects of state behavior that major theories of international politics claim they do instead they tend to determine the intentions of adversaries on the basis of preexisting beliefs theories and personal impressions yarhi milo also shows how intelligence organizations rely on very different indicators than decision makers focusing more on changes in the military capabilities of adversaries knowing the adversary provides a clearer picture of the historical validity of existing theories and broadens our understanding of the important role that diplomacy plays in international security

over the past decade literary critic and editor jerome mcgann has developed a theory of textuality based in writing and production rather than in reading and interpretation these new essays extend his investigations of the instability of the physical text mcgann shows how every text enters the world under socio historical conditions that set the stage for a ceaseless process of textual development and mutation arguing that textuality is a matter of inscription and articulation he explores texts as material and social phenomena as particular kinds of acts mcgann links his study to contextual and institutional studies of literary works as they are generated over time by authors editors typographers book designers marketing planners and other publishing agents this enables him to examine issues of textual stability and instability in the arenas of textual production and reproduction drawing on literary examples from the past two centuries including works by byron blake morris yeats joyce and especially pound mcgann applies his theory to key problems facing anyone who studies texts and textuality

an in depth look at why american universities continue to favor u s focused social science research despite efforts to make scholarship more cosmopolitan u s research universities have long endeavored to be cosmopolitan places yet the disciplines of economics political science and sociology have remained stubbornly parochial despite decades of government and philanthropic investment in international scholarship the most prestigious academic departments still favor research and expertise on the united states why seeing the world answers this question by examining university research centers that focus on the middle east and related regional area studies drawing on candid interviews with scores of top scholars and university leaders to understand how international inquiry is perceived and valued inside the academy seeing the world explains how intense competition for tenure line appointments encourages faculty to pursue american projects that are most likely to garner professional advancement at the same time constrained by tight budgets at home university leaders eagerly court patrons and clients worldwide but have a hard time getting departmental faculty to join the program together these dynamics shape how scholarship about the rest of the world evolves at once a work and occupations study of scholarly disciplines an essay on the formal organization of knowledge and an inquiry into the fate of area studies seeing the world is a must read for anyone who cares about the future of knowledge in a global era

what turns rich nations into great powers how do wealthy countries begin extending their influence abroad these questions are vital to understanding one of the most important sources of instability in international politics the emergence of a new power in from wealth to power fareed zakaria seeks to answer these questions by examining the most puzzling case of a rising power in modern history that of the united states if rich nations routinely become great powers zakaria asks then how do we explain the strange inactivity of the united states in the late nineteenth century by 1885 the u s was the richest country in the world and yet by all military political and diplomatic measures it was a minor power to explain this discrepancy zakaria considers a wide variety of cases between 1865 and 1908 when the u s considered expanding its influence in such diverse places as canada the dominican republic and iceland consistent with the realist theory of international relations he argues that the president and his administration tried to increase the country s political influence abroad when they saw an increase in the nation s relative economic power but they frequently had to curtail their plans for expansion he shows because they lacked a strong central government that could harness that economic power for the purposes of foreign policy america was an unusual power a strong nation with a weak state it was not until late in the century when power shifted from states to the federal government and from the legislative to the executive branch that leaders in washington could mobilize the nation s resources for international influence zakaria s exploration of this tension between national power and state structure will change how we view the emergence of new powers and deepen our understanding of america s exceptional history

how do dealers price contemporary art in a world where objective criteria seem absent talking prices is the first book to examine this question from a sociological perspective on the basis of a wide range of qualitative and quantitative data including interviews with art dealers in new york and amsterdam olav velthuis shows how contemporary art galleries juggle the contradictory logics of art and economics in doing so they rely on a highly ritualized business repertoire for instance a sharp distinction between a gallery s museumlike front space and its businesslike back space safeguards the separation of art from commerce velthuis shows that prices far from being abstract numbers convey rich meanings to trading partners that extend well beyond the works of art a high price may indicate not only the quality of a work but also the identity of collectors who bought it before the artist s reputation was established such meanings are far from unequivocal for some a high price may be a symbol of status for others it is a symbol of fraud whereas sociological thought has long viewed prices as reducing qualities to quantities this pathbreaking and engagingly written book reveals the rich world behind these numerical values art dealers distinguish different types of prices and attach moral significance to them thus the price mechanism constitutes a symbolic system akin to language
