Democratic Professionalism 2015-10-20 in the world of aristotle the education of individuals might have led to virtuous action but today integrity of action also requires the education of institutions those very structures designed to enhance the just use of knowledge too often stand in the way
2016-07-27

integrity bureaucracy shapes our actions in a manner reflective of a platonic approach to knowledge and the political order an approach that labels some as true knowers and grants them the ultimate power to decide what is to be done professionalism the institution with which we legitimize and use expertise imbues our actions with the aquinian belief that any disobedience of directives from reigning experts risks unacceptably the loss of order in our research system representing our main collective effort to generate new knowledge we unwittingly put into practice hume's conception of knowledge which takes the outcomes of science to be an accumulation of facts and john stuart mill's political theory which overlooks the role of community in the lives of individuals the stakes are high argues dr kerr given these conceptions of knowledge and the political values that are inherent in our primary modes of knowledge utilization conceptions that we should not embrace only with fundamental reforms of our institutions can our society hope to gain integrity dr kerr discusses how bureaucracy professionalism and the research system could be altered so that they might structure actions in more defensible and desirable ways

Knowledge Management 2008 public administrators have long wrestled with the problem of bringing professional policy knowledge or technical expertise to bear on decision making in a contentious policy arena a common solution addresses political conflict by developing institutions that buffer decision making from the regular influence of elected officials this article compares the effects of politically buffered decision making relative to politically influenced decision making by drawing on case studies of county efforts to site and develop landfills and incinerators in new york state some of these counties created a special district government known as a "public authority" in an effort to remove the "politics" from decision making others used their regular line agencies the cases show that the public authority siting processes were less likely to accommodate the political law and medical

more likely to focus on research based policy or technical criteria however this professional focus then made them vulnerable to political conflict and likely contributed to the high failure rate of the public authority projects in contrast the more successful line agency processes influenced by elected officials political concerns tended to arbitrage away political conflict at the expense of professional or technical considerations but these processes were more likely to succeed one case provides a possible middle ground rather than arbitraging away points of conflict the administrators aggressively pushed decision making back into the political process making elected officials choose the policy options this process required elected official leadership education and commitment and resulted in decisions that were professionally and technically informed as well as resilient to political conflict

Politics Versus Professionalism 2010 current anxiety about the future of news makes it opportune to revisit the notion of professionalism in journalism media expert silvio waisbord takes this pressing issue as his theme and argues that professional journalism is both a normative and analytical notion it refers to reporting that observes certain ethical standards as well as to collective efforts by journalists to exercise control over the news professionalism should not be narrowly associated with the normative ideal as it historically developed in the west during the past century instead it needs to be approached as a valuable concept to throw into sharp relief how journalists define conditions and rules of work within certain settings professionalization is about the specialization of labor and control of occupational practice these issues are important particularly amidst the combination of political technological and economic trends that have profoundly unsettled the foundations of modern journalism by doing so they have stimulated the reinvention of professionalism this engaging and insightful book critically examines the meanings expectations and critiques of professional journalism in a global context

The Politics of Professionalism 2000-05-01 advocates of academic freedom often view it as a variation of the right to free speech and an essential feature of democracy stanley fish argues here for a narrower conception of academic freedom one that does not grant academics a legal status different from other professionals providing a blueprint for the study of academic freedom fish breaks down the schools of thought on the subject which range from the idea that academic freedom is justified by the common good or by academic exceptionalism to its potential for critique or indeed revolution fish himself belongs to what he calls the it s just a job school while academics need the latitude call it freedom if you like necessary to perform their professional activities they are not free in any special sense to do anything but their jobs academic freedom fish argues should be justified only by the specific educational good that academics offer defending the university in all its glorious narrowness as a place of disinterested inquiry fish offers a bracing corrective to academic orthodoxy
